Subject: Site 21 Draft SSI - comments

Hi all,

I have reviewed the referenced document and submit the following DEQ comments:

Typographical comments:

- Page 5-4, first full paragraph, first line - remove "the" before "August 2003"
- Page 5-4, third line from bottom of page - add "to" after "According"

General comments:

- In addition to the future actions stated in the Recommendations section of the report (page 6-3), one groundwater sample should be collected about 75 feet south of TW106 (use of a temporary monitoring well is acceptable).
- A statement or two explaining why there is not a need to further examine the TCE risk in surface water should be included in Section 5 (as Kim discussed yesterday, TCE volatilizes too rapidly to create a risk - include a reference).

Additional DEQ comments were sufficiently addressed during the May partnering meeting.

Thank you for the opportunity to comment.

Karen M. Doran
